Japan's Financial Services Agency raided the Coincheck headquarters in Tokyo after the hack

February 3, 2018 By Pierluigi Paganini

Cryptocurrencies are in the middle of a Tempest, on Thursday India announced it would adopt measures to prevent the use of virtual currencies in the country, the value of Bitcoin dropped below \$9,000 for the first time since November. Finance Minister Arun Jaitley, in his annual budget, explained its government would "take all measures to eliminate use of these crypto-assets in financing illegitimate activities or as part of the payment system".

Cyber Crime

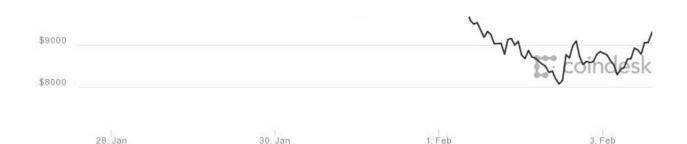

A week after the security breach suffered by the virtual currency exchange Coincheck, Japanese authorities raided the company.

The hackers stole 58 billion yen (\$530 million), an amount of money that is greater than the value of bitcoins which disappeared from MtGox in 2014.

After the MtGox case, the Japanese government passed a law on cryptocurrencies that assigns to the FSA the tack of regulating the exchanges operating in the country.

Coincheck had submitted an application to the FSA for a licence, the company was waiting for the permission.

This week, Coincheck announced it will refund about \$400 million to 260,000 customers after the hack, the company will use its own funds.

Coincheck was founded in 2012, it is one of the most important cryptocurrency exchange in Asia. The company announced it will refund about \$400 million to customers after the hack.

Japanese media criticized the company blaming the management to have underestimated the importance of security of its investor, they said Coincheck "expanded business by putting safety second".

On Friday, agents of the Financial Services Agency raided the Coincheck's headquarters in Tokyo's Shibuya district with the intent to verify that the company adopted proper security measures to protect its assets.
